

0:00 Hello! My name is Peggy Draver Today I'd like to talk to you about using videos in education

0:08 In a traditional face-face-classroom videos can enhance the learning process by giving

0:13 students the opportunity to take control of their own learning. When students are engaged

0:19 in watching and interacting with the video through note taking, thinking or applying

0:26 concepts deeper learning is achieved.

0:29 Video can also be a way to create dialog to enhance the learning experience among adult

0:35 learners as well as children. Studies have shown that students had improved ability to

0:41 recall facts, demonstrated higher problem-solving capabilities, and increased their overall

0:49 interest in the subject matter.

0:51 The challenge is finding useful, high quality and copyright free instructional videos from

0:56 knowledgeable sources. Poor quality videos are distracting and lessen the motivation

1:02 to continue watching.

1:05 Using videos for online instruction is a way for instructors to add a personal presence

1:10 to their classes, which may help with building an online community for their courses.

1:15 The convenience of watching videos anytime and anyplace allows time to reflect on the video.

1:23 You can stop rewind and replay the video to gain deeper understanding.
